Forecast for Monday 18 Oct 2021

Weather: Poor visibility will be a large feature of the day with any fleeting breaks confined to the northern foothills of the Nevis and Glen Coe ranges. Rain will spread northeastwards from mid morning to give all ranges a few hours of wet weather, but as this clears away north through evening it will leave extensively foggy and drizzly conditions.

Chance of cloud free mountain/hill tops above 800m: 10% across the far north, otherwise virtually no chance.

Visibility: Widely limited to a few hundred meters above the cloud base which will sit at around 400-600m, through much of the day. Rain and drizzle will turn lower slopes and glens rather hazy.

**Level above which ground is expected to be frozen/snow is expected to settle.*

Met Office Aberdeen Meteorologist's View

Strong winds will approach gale force above munro level from late morning. This, along with rain and drizzle will give a significant cooling effect.

Forecast for Tuesday 19 Oct 2021

Weather: Southerly winds will maintain cloudy, dull conditions across all ranges although some early brightness may develop across northern Lochaber. Outbreaks of heavy rain spread northeast through morning with a good chance of heavy showers and perhaps thunderstorms into the afternoon and evening. Mild.

Maximum wind: South 20-30mph.

Chance of cloud free mountain/hill tops above 800m: 20%.

Visibility: Thick cloud persisting above 600m across all but the more sheltered northern areas, but cloud will become increasingly extensive above around 400m through evening across all ranges. Heavy rain will affect visibility in the glens, obscuring neighbouring slopes.

Temperature: **Glens:** 14 Celsius.
At 800m: Around plus 9 Celsius.
Freezing level: Well above summits.
